

Minnesota B3 Benchmarking

A no-cost program to help you reduce the energy consumption of your building!

The goal of the B3 Benchmarking program is to benchmark the energy consumption of all public buildings in. Once your building's actual energy consumption is compared to its model benchmark, you will have a good idea of the opportunity available to reduce its energy consumption.

(For further information concerning the B3 Benchmarking program, please visit our website at www.mnbenchmarking.com and click on the 'About B3' tab).

Here is the process:

1. Please visit this link to submit your buildings for entry in the B3 Benchmarking data store:

<http://www.mnbenchmarking.com/NewBuildingForm.aspx>

2. After we receive your building information from the webpage above, we will

- Enter your building(s) in the B3 data store
- Set-up your account

3. We will send you an email with your B3 web site credentials. We will either approve your requested user name and password, or assign new ones in the case of a conflict.

4. Then, we ask that you fill in the rest of the building and consumption information on the B3 web site. As you enter the information on the site, you will receive instant feedback on how your building is performing compared to the computer-generated energy model created by the B3 site. You will also be able to compare the performance of multiple buildings against their respective energy models, if you are responsible for more than one building.

We look forward to receiving this information from you. Please contact Darin Aguilar with any questions or concerns :
