

# Internal duct work

- This is a simple assembly of insulated boxes, each 4 feet wide and 8 ft tall. The duct work is round for efficient air flow; concrete form tubes work well.

# The Collector Assembly

- Converter plates are formed in a “Z shape and placed at 27 degrees, painted flat black with heat resistant paint. Top and bottom converter plates are removed to show duct work.

# Hot Air Return To Building

# Cool Air Supply From Building

- YES! TEAM members install vinyl cover to panel.
