

Seed Grants to Catalyze Community Clean Energy

The Clean Energy Resource Teams provide limited financial assistance through Seed Grants that catalyze local energy efficiency and renewable energy projects. Grants typically range from \$500 to \$5,000.

Every two years, CERTs seeks applications to support labor costs for clean energy projects. With a new round in late summer 2019, it's the perfect time to start thinking about a proposal!

FUNDING OBJECTIVES

- 1 Encourage community-based clean energy projects
- 2 Spur projects that are highly visible and replicable
- 3 Provide a forum for community education
